NITTA

BELTING FOR THE *Presort Mailing* *Industry*

THE NITTA ADVANTAGE

Nitta Corporation of America offers many different belting options for the various applications throughout presort mailing facilities. Nitta belts are time-tested and have been proven to outperform the competition. These high quality specifications result in longer life and better cost of ownership / return on investment.

Nitta offers a complete belting solution for the presort mailing industry, including nylon core skive-splice, finger-splice, seamless belts, conveyor belts, and tools.

BELTING FOR PRESORT APPLICATIONS

Nitta's extensive line of belting products covers key machines and applications in presort mailing, including:

- Vacuum Feed Belts
- Drive Belts
- Stacker Bin Belts
- Transport Belts

Nitta products for the presort mailing industry include:

- **PolyBelt™** – Super-strong nylon core, extended-life skived joining, high operating duty cycles. Made in the USA – quicker delivery, price stability, custom belts possible.
- **PolySprint™** – High-strength polyester core, finger-spliceable quick-melt urethane, easy installation. Greatly reduces costly downtime as a quick and easy-to-replace alternative to skived products.
- **SEB™** – Seamless (truly endless) belts, integrally molded with highly accurate dimensions, achieving high rotation precision and durability.
- **Conveyor Belting** – Hundreds of configurations, wide variety of surfaces. Extensive selection of PVC, PU, nylon, high duty and unsupported belting, plus many modification options such as guides, cleats and holes.
